Code:

Con.CreateSQLTable ("Table1", "mastertablename")

What is the syntax that needed to be added to the code above if i want to set the data type of certain column when making sql table?

Ex: i want to set "number" column to numeric.

So i don't have to reedit the data type of column anymore with third-party application.

Thanks.

NullReferenceException

Hi Dzt,

Thanks for your above program and answering all the questions on SQL

However, when I try to compile your CSV2SL3 program to run on Device, it give me " NullReferenceException ". I have even included SQLDevice.dll in this folder with all your files.

I have run other SQL program(eg. SQL Viewer from Erel) without any problem. ie Net 2.0 is installed.

Thanks

TC

Hi tcgoh,

Actually this program it was made to run on a desktop computer. To combile for PPC you need to:

- 1. Copy form C:\Program Files\Anywhere Software\Basic4ppc Desktop\Libraries SQLDesktop.DLL and SQLDevice.DLL.
- 2. Tools->Components->Device->Add DLL SQLDevice.DLL
- 3. Now it can compile

And copy to your device the produced EXE, SQLDevice.DLL and from C:\Program Files\Anywhere Software\Basic4ppc Desktop\Libraries\SQLNative\Device the System.Data.SQLite.DLL file.

📳 To Create, Edit, Modify table and registers in sqlite 3 I recommend this...

A program for windows excellent. Is freeware at this moment:

SQLite Database Browser

http://sqlitebrowser.sourceforge.net/

Hi dzt,

I'm trying to build a program with sl3. However, I face a few problems with data convertion, could you kindly point me to the right direction:

- 1. Your CSV2DLS3 is great, but it sometime give an error on the cmd line "DROP TABLE CUSTS"! (msg no such table:custs) Can I use another code like clear table? or....
- 2. My data file comes from FoxPro, can FoxPro export to sl3 file? if so do I need additional drivers or special codes.
- 3. Can Basic4ppc work with sql data file or only with sl3?

Thanks and regards

TC
